Dhananjay Jadhav

Bangalore, India

dhananjayjadhav2151@gmail.com — +91-8830449186 — LinkedIn — GitHub — LeetCode

Professional Summary

Backend Software Engineer with 4+ years of experience building scalable microservices and high-performance REST APIs using Java and Spring Boot. Proven expertise in optimizing cloud infrastructure (AWS/Azure), resolving critical production bottlenecks.

Skills

- **Languages & Frameworks:**
  Java, Spring Boot, MongoDB, MySQL, MVC, Hibernate, JUnit, Design Patterns, Low Level Design (LLD), High Level Design(HLD), Multithreading, Python,

- **Tools & Platforms:**
  Git, GitHub, JIRA, Postman, Visual Studio, IntelliJ IDEA, Maven, AWS (S3, Lambda, DynamoDB), Azure Blob Storage, Microservices, REST APIs, Debugging & Log Analysis, Docker, Unit Testing, RabbitMQ

- **AI & Modern Development Skills:**
  Large Language Models (LLMs) (GPT-4o, Claude 3.5 Sonnet, Google Gemini), Generative AI, LangChain, Prompt Engineering, AI-assisted software development, GitHub Copilot, Claude Code, LangChain

Experience

- **Software Development Engineer**
  Flynava Technologies *July 2026 - Present*

  Project Description:
  Jupiter is a cloud-based airline pricing platform that processes multi-channel market data to optimize seat yields and automate fare distribution.

  Technologies:
  Java, Spring Boot, REST APIs, MongoDB, RabbitMQ, AWS S3, Azure Blob Storage, Intellij Idea, Studio 3T, Github, Claude Code

  Key Responsibilities:

  - Integrated robust AWS S3 cloud storage solutions across core enterprise modules—including Workpackages, Rulespackages, Footnotes, and Contract Packages—developing secure endpoints for the upload, retrieval, and deletion of PDF documents.
  - Spearheaded development of highly scalable REST APIs for processing complex YQ, YR, surcharge, and tax calculations, ensuring 99.9% data accuracy in fare distribution.
  - Engineered state-management capabilities within the Jupiter application, enabling users to seamlessly edit pending draft workpackages, which streamlined operational workflows and improved platform flexibility.
  - Resolved critical production bugs and executed client-specific Change Requests (CRs), rapidly deploying cross-functional backend fixes to maintain system stability and adhere to strict enterprise SLAs.
  - Engineered a query optimization solution for a Spring Boot backend handling 800,000+ records, resolving critical OutOfMemory (heap) exceptions in production and restoring system stability.
  - Architected an asynchronous, centralized logging pipeline utilizing RabbitMQ to stream audit logs to a dedicated consumer service, which batches and periodically archives them into AWS S3 to reduce primary database load.
  - Spearheaded a cross-cloud infrastructure migration for a major airline client, successfully transitioning enterprise work package storage from AWS S3 to Azure Blob Storage with zero data loss.
  - Designed a highly scalable Market API to aggregate and cache complex geographical hierarchies (cities, regions, networks) into a cluster collection, significantly improving data retrieval latency.
  - Enforced strict Role-Based Access Control (RBAC) across workflow collections, dynamically securing operational data by restricting market-specific trigger visibility based on user authorization profiles.

- **Software Development Engineer**
  Mountblue Technologies *Sep 2024 - March 2026*

  Technologies:
  Java, Spring Boot, REST Api, S3, Lambda(AWS), Dynamo DB, MySQL, Postman, Git, debugging & log analysis, Maven, Intellij IDEA, Hibernate, ChatGPT, Cursor.

  Platform & Projects:
  Loyalty SaaS Platform (Enterprise Integrations: Pidilite, Dompet Aman, Abbott)

  Key Responsibilities:

- Spearheaded the development of Java-based backend services, successfully integrating 5+ major enterprise clients into Capillary's loyalty platform.
- Engineered secure API integrations processing over 10,000 daily requests, incorporating robust authentication, request validation, and client-specific business rules.
- Optimized scheduled background jobs, accelerating data synchronization across 4 distinct systems and reducing processing lag by 20%.
- Architected and refined SFTP-based file processing pipelines, increasing data ingestion efficiency by 30% for loyalty data updates.
- Streamlined data synchronization flows between Middlelayer, CRM, S3, and external systems, ensuring 99.9% data accuracy.
- Resolved 50+ complex API response and event processing issues, improving data consistency across various client implementations.
- Collaborated with 4 cross-functional teams (Product, Data, QA, Client Engineering) to accelerate smooth and reliable client integrations.
- Authored scalable, config-driven integration modules, reducing the onboarding time for new brands and markets by 15%.

- **Software Development Engineer**
  Tech Mahindra *May 2021 - Jul 2023*

  Project Description:
  The project aimed to provide advisors and clients with tools and functionalities to improve the efficiency of banking-related operations.

  Technologies:
  Java, Spring Boot, Spring Security, Hibernate, MySQL, DB2, IntelliJ IDEA, JUnit, Mockito, Maven.

  Key Responsibilities:

  - Architected a microservices framework to decouple functionalities, increasing system modularity and scalability by 30%.
  - Accelerated data retrieval speed by 15% while ensuring strict data integrity and optimal application performance.
  - Organized best practices for branch management and pull requests, maintaining rigorous code quality across a team of 8+ developers.
  - Authored over 200 comprehensive unit tests using JUnit and Mockito, validating business logic and API responses.
  - Continuously refactored and streamlined the existing codebase, achieving a 15% performance boost in core services.
  - Implemented advanced security measures for authentication and authorization, safeguarding sensitive banking operations.
  - Produced detailed documentation for 30+ API endpoints and usage guidelines, simplifying integration for external teams.

Education

- **Pune University**
  BE in Electronics and Telecommunication *2020*

Awards and Certifications

- Completed ChatGPT prompt engineering for developers on Deeplearning.ai.
- Achieved AZ-900 certification [Azure fundamentals] - Jan 2022.
- Awarded 'Automation Ninja' from Tech Mahindra for demonstrating outstanding dedication and mastering the automation training program 2 weeks ahead of schedule.
- Received two 'Pat on the Back' awards from Tech Mahindra for exceptional dedication to work and customer satisfaction, successfully delivering 100% of projects on time.
